Cyber Security for Electronic Medical Devices

With electronic medical devices capable of logging and storing more and more data on device use and patient health, cyber security threats to electronic medical devices are growing. Even the FBI recently warned the industry that this will create a rich environment for cyber criminals to exploit.

Cyber attacks on medical devices may compromise not only the safety of patients, but also the security of hospitals and healthcare networks. Electronic protected health information is enormously valuable to cyber thieves, who can use stolen data for insurance fraud, identity theft and other crimes. But perhaps most importantly, the potential harmful threat to patients is all too real.

What can you do now to prepare? Become ISO 27001 certified!

Contact Perry Johnson Registrars, Inc. for more information on ISO 27001 – Information Security Management System Certification or a project manager in your area via email at pjr@pjr.com or via phone at 1-800-800-7910.
